

PODOVH-0001 Small Ovalhouse Hardstanding

The Small Ovalhouse will require a hardstanding base no less than 205 cm wide by 140cm deep, although a paved area the size of the building looks much better.

This can be made from concrete or a hardcore and traditional patio style base.

If laying a base on the lawn it is advised to go larger than the floor dimensions to make it easier to mow around the building, using a 30cm bed of hardcore, sand and cement. If you already have a level patio area of slab or decking the Pod can be installed directly onto this.

Allow an area 300cm x 250cm square for the overall building size

Electrical Installation

WARNING: Any electrical installation should be carried out by a qualified electrician.

The Small Ovalhouse is fitted with a consumer unit which can be located in the back of the cupboard in the rear of your building. The power will need to enter the building through a compression gland fitted approximately 50cm high in the middle of the back panel of the building. The power supply will come with both male and female 16A connection sockets ready for your cable to be connected.

- Included
- 13amp Power Socket
 - 1 Kw Blow Heater
 - 12v down lighting
